UNIVERSITY OF KERALA**

Submitted to:

**DIRECTORATE OF ENVIRONMENT AND CLIMATE CHANGE (DOECC)
GOVERNMENT OF KERALA, THIRUVANANTHAPURAM**

MAY 2023

1.1 Title of the Project:

Establishing Rainwater Harvesting / Aquifer Recharging Structures in Public Building and Selected Households in Amboori Village, Thiruvananthapuram

1.2 Sanction order No:

(Agreement No. DoECC/AEO2/CC/1680/2019)

1.3 Name and Address of PI:

Dr. Sabu Joseph
Professor
Dept. of Environmental Sciences
University of Kerala, Kariavattom
jsabu2020@gmail.com

1.4 Total Budget Outlay :Rs. 20,90,000/-

1.5 First instalment released : 8,36,000/-

1.6 Second instalment released : 6,69,575/-

1.7 Date of starting of the project : 28/01/2021

1.8 Duration of the project : Two years and two months

1.9 Period of study: 28/1/2021 to 06/04/2023

2.1 Introduction

Village Adoption means to work along with the community at the grass root level, while enabling / empowering them for pursuing the goal of development of the village in line with the Sustainable Development Goals and learning as to what works and what does n't and evolve a model of village development for replication and trainings.

The Village Adoption study provides an opportunity to understand the factors that are responsible for under-development in a village, despite plethora of programmes /schemes in vogue. They also get familiar with the interventions, participatory interaction, understanding the prevailing situations, mobilization of community, initiate participatory processes, establishing linkages among line departments etc. which are likely to strengthen the process of development and ensure poverty reduction and strengthen natural resources management especially water, soil and forest

management. The process of Village Adoption is thus an experimentation and involvement of faculty members, researchers and students of a university to drive the process of development in a selected village especially from a rural area.

The village adoption study envisages integrated and holistic development of village or cluster of villages selected on a micro/macro watershed basis, on an Action Research mode. The village adoption provides an opportunity to academicians, policy makers and civil society, to get sensitized and understand the problems and social dynamics that exist at the grass root level and assimilate the facilitating/catalyzing factors responsible for building sustainable and cohesive communities through inspiring, igniting, educating and enabling them to develop by utilizing multiple opportunities with special focus on disadvantaged sector. The village adoption will also empower the faculty for better training, research and thus rural development.

The Dept. of Environmental Sciences, University of Kerala are involved in research, action research, consultancy and training programmes in various domains of environment, particularly water and soil with their pollution and conservation studies etc. This broad stream of activities, especially research, enables the faculty members to come out strong on theoretical aspects. However, the expertise gained at universities should be transferred and shared to the rural sectors to empower the rural population as envisaged by the University Grants Commission.

2.2 Objectives of the Project

Village Adoption involves:

- To inspire the rural communities to dream, plan, mobilize forces and resources for sustainable development of each member who can realize his/her full potential and create such ecosystem for positive behavioral transformation
- The plan will cover water resources management, natural resource management, waste to wealth, capacity building, knowledge dissemination, community mobilization etc.
- To establish rainwater harvesting structures in selected houses and public buildings (n= ~100) of Amboory Panchayaths to recharge aquifer in water scarcity regions, and hence for sustainable management of groundwater resources.
- To promote rainwater harvesting and well recharging in rural communities.

2.3 Scope of the Project

This project aims in increasing rain water harvesting in households in the water scarce regions of

Amboori village. Rain water harvesting through recharge of wells can accelerate groundwater table and will in turn reduce water scarcity during dry summer season. This will help the people of village to cope with the changing climate. This is an ongoing project and need to do rainwater harvesting in some more 100 houses.

2.4 Materials and Methodology

Model Rainwater Harvesting structures

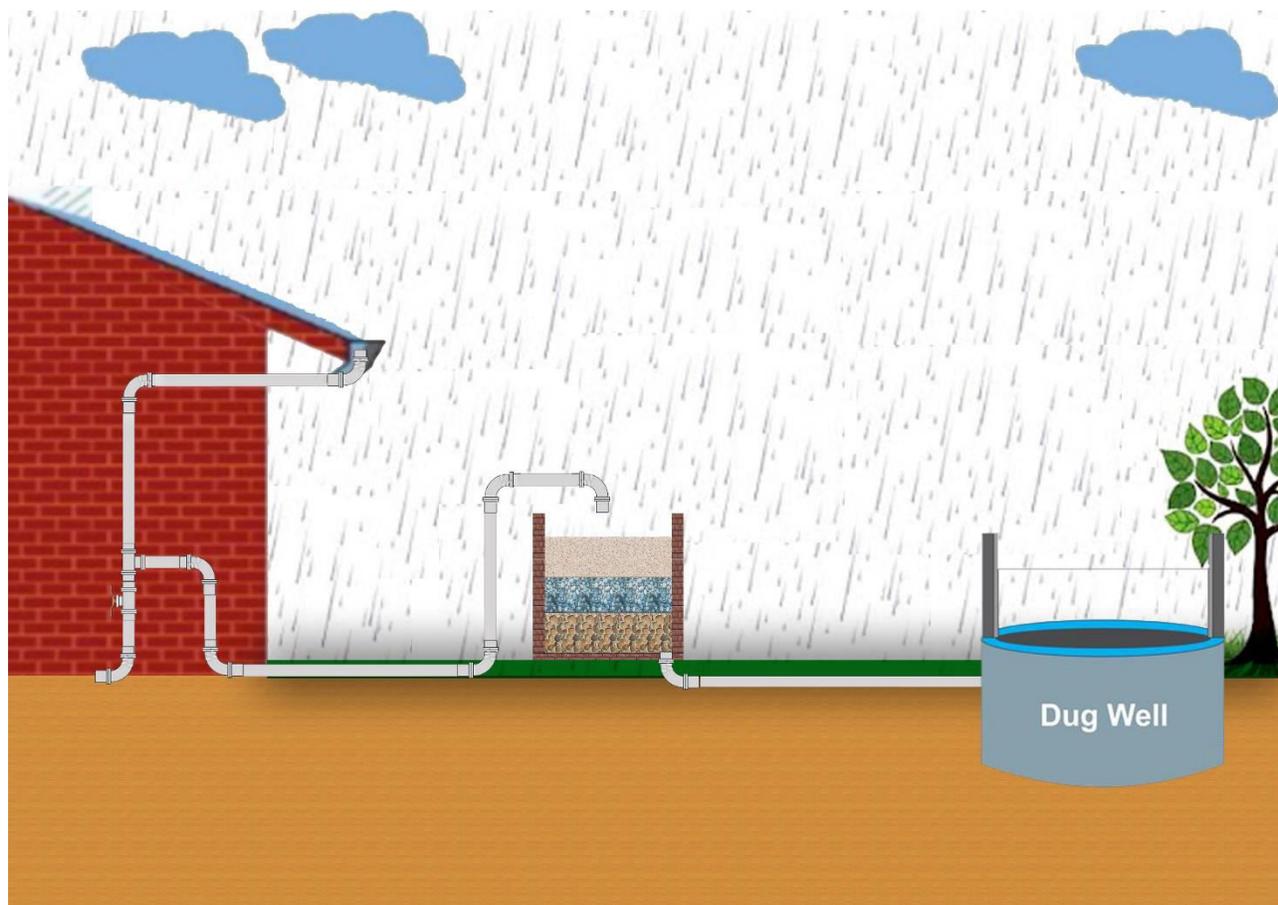

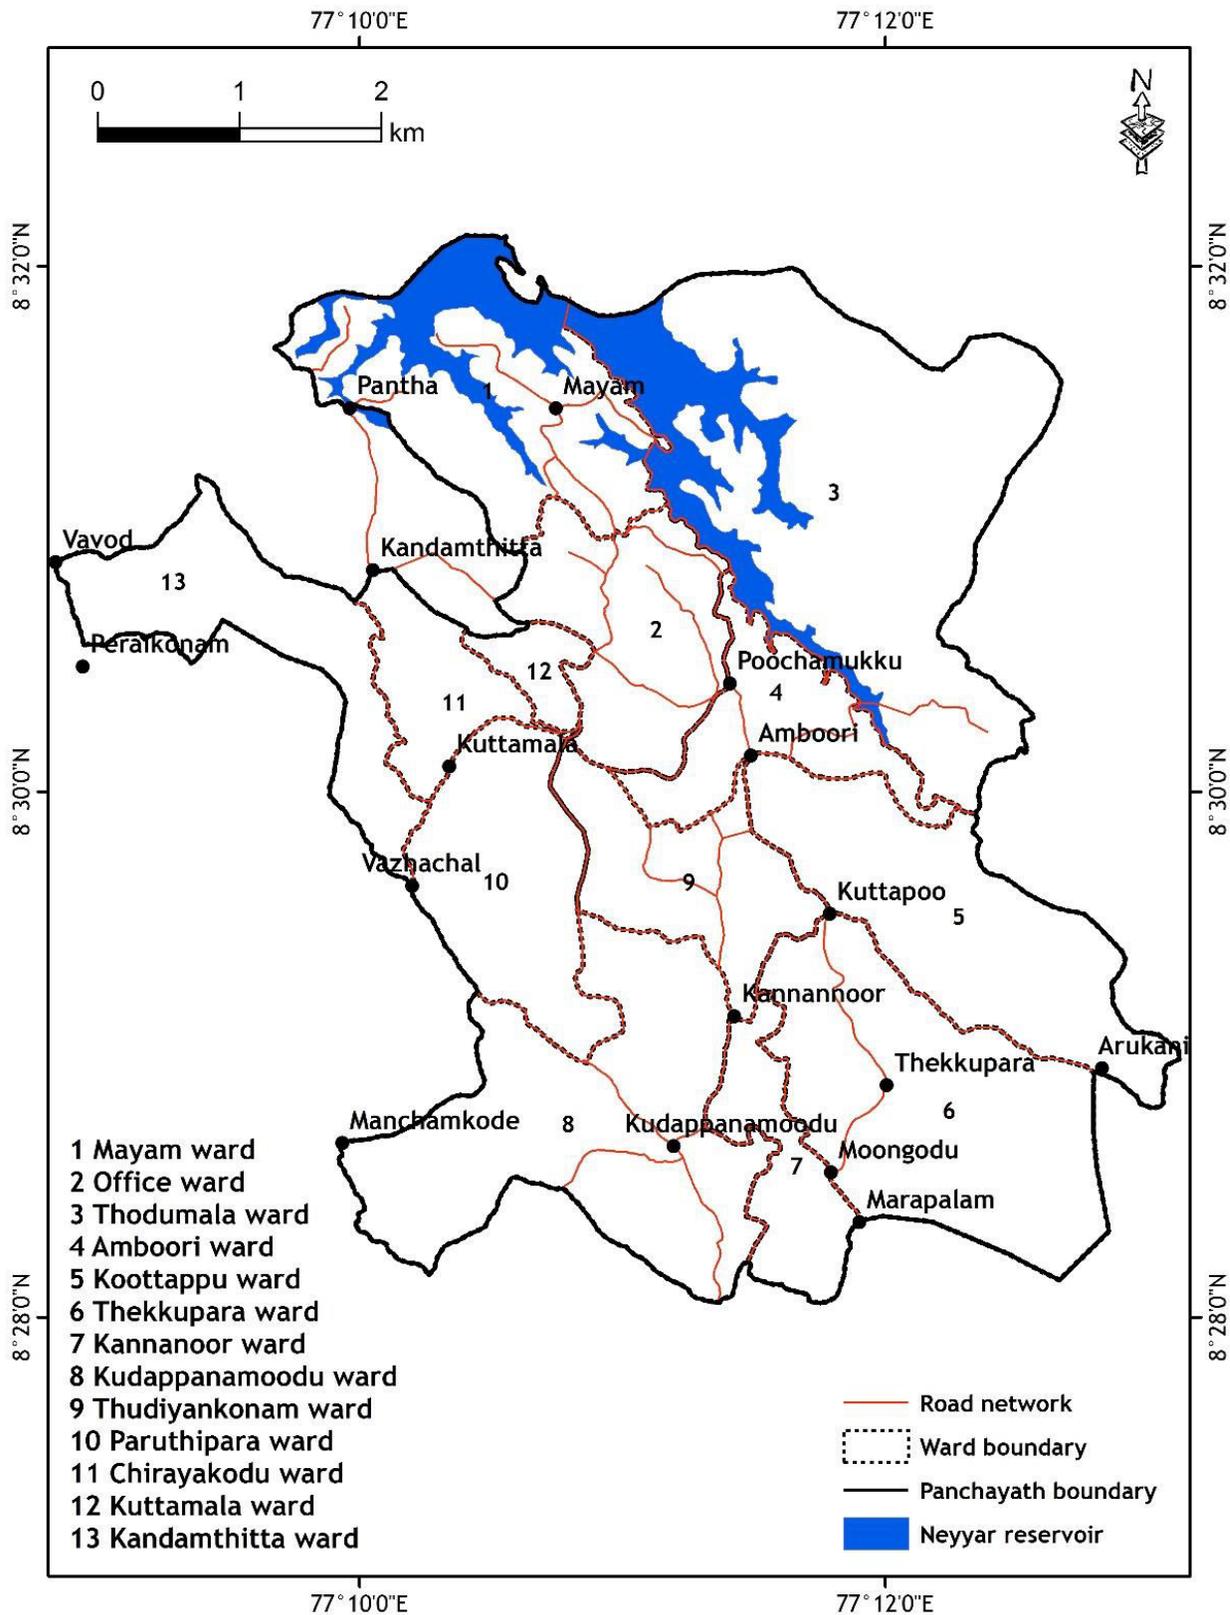

Figure 1.1 Model of Rainwater Harvesting Structure implemented at Amboory Village.

The structure consists of a pre-cast ferrocement filtering unit of 75” height and 70” diameter made up of 50 x 50 cm weld mesh 1 layer and ½ x ½ “ chicken net 2 layers (outside and inside) with three coat plastering. It is partially filled with materials like metal – 10 cm thickness, charcoal- 10 cm thickness and chips metal – 10cm thickness. A top cover is also there. The roof top water is directed into this structure through a 2” PVC pipe and another 3” PVC pipe connects the outlet of filtering unit and it is directed into the bottom of the well.

Study Area:

Amboory village (Area= 38km²) in Thiruvananthapuram district is selected as the study area. The activities cover steps to restore ecological balance through water conservation, enhance water table through ground water recharge and ensure safe and quality drinking water. About hundred houses in the Amboori village will be selected for the rainwater harvesting. With the permission of panchayaths rainwater harvesting by means of aquifer recharge will be done. The domestic wells and geology of the area of the selected houses will be investigated by a geologist/hydrogeologist for its suitability for aquifer recharging. The structures will be done in collaboration with the trained persons from 'Jalanidi', Govt. of Kerala. This will enable overall improvement in quantity of water availability.

Criteria used to select houses/public buildings in consultation with Panchayath authorities:

1. The house should belong to BPL category and accessibility to house should be present.
2. There should be a dug well of considerable depth (>25 ft. depth).
3. Building should be suitable for fitting rainwater pipes and dug well should be near to it.
4. The terrain should be gentle slope to flat terrain.
5. Preference should be given to water scarcity regions of panchayath.
6. Preference should be given to the ward or regions adjacent to forest area.

PHASE - I

List of Project Beneficiaries – First Phase of Project

Sl.No	Project No.	Name and Address of Beneficiary	Ward
1.	AMB-01 AMB/01/01	Moncey Jijo Kunneil Veedu Njavarakkad, Mayam P.O. Mob. 8943895597	Mayam

3. UC and SE for the period 28/1/2021 to 30/9/2021: attached separately.

**STATEMENT OF EXPENDITURE
(28-1-2021 to 30-9-2021)**

Sl. No	Sanctioned Head of Expenditure	Total Amount sanctioned (Rs)	Amount Released (1 st instalment)	Total Expenditure Incurred (Rs)	Unspent Balance (Rs)
1	Rainwater Harvesting Structure System (n=100)	16,00,000/-	6,40,000/-	5,48,063/-	91,937/-
2	Project Fellow	2,40,000/-	96,000/-	47,742/-	48,258/-
3	Travel	1,50,000/-	60,000/-	60,000/-	NIL
4	Miscellaneous	1,00,000/-	40,000/-	13,770/-	26,230/-
Total		20,90,000/-	8,36,000/-	6,69,575/-	1,66,425/-

Unspent Balance as on 30/9/2021 = 1,66,425/-

Amount to be released second and third instalment together = 12.54 lakhs

I request you to kindly release the second and third instalment together for the smooth completion of the establishment of Rainwater harvesting structures in selected houses/public building at Amboory panchayath.

Executive Summary of the Project

The project “Establishing Rainwater Harvesting / Aquifer Recharging Structures in Public Building and Selected Households in Amboori Village, Thiruvananthapuram” was started on 28/01/2021 and completed 2 years and 2 months as on 06/04/2023. During this period the project completed a total of 104 rainwater harvesting structures connected to 104 houses. The target given was 100 dug wells. It includes 44 structure construction in the first phase of the project and 60 constructions during the second phase of the project. The water from the roof is allowed to enter a ferrocement filtering unit with 75 cm height and 75 cm diameter. It is partially filled with a three layer like bottom gravel overlined by charcoal and sand at the top. These 104 houses covered all the 13 wards of the panchayath with emphasis given to water stressed wards like ward II (Office Ward) and ward IX (Thudiyamkonam).

One advantage of this project is that about three old panchayat dug wells, already under abandoned conditions, were cleaned by the local people based on our request and were revived by rainwater harvesting structures. Most of the harvesting structures are attached with deep wells, (> 25 ft) and wells were chosen in such a way that one recharging site will add water to the nearby 5-10 wells by subsurface groundwater flow. All the wells are functioning well. A WhatsApp group will be formed for the families of the 104 recharge connected wells, and follow-up action programme will be shared periodically. The water table depth of the wells will be monitored for the different seasons and the availability of water during summer will be monitored.
